Job Market Paper

A Market Solution under Food Security Constraints: Evidence from a Policy Experiment in China

Abstract. I study the Chongqing Land Coupon Reform, a market-based land policy that reallocates land-use rights across space while maintaining aggregate farmland. Using transaction-level data and a quantitative spatial model with heterogeneous agricultural productivity, endogenous migration, and regulated land conversion, I show that the policy reallocates land from low-productivity rural areas to urban fringe counties, promotes rural-to-urban migration, increases grain yields in coupon-purchasing counties, and mitigates distortions from food-security-driven land regulations.
